# Discover More about the Analytics-Arch-201 Certification

Are you interested in passing the Salesforce Analytics-Arch-201 exam? First discover, who benefits from the Analytics-Arch-201 certification. The Analytics-Arch-201 is suitable for a candidate if he wants to learn about Tableau. Passing the Analytics-Arch-201 exam earns you the Salesforce Certified Tableau Architect title.

While preparing for the Analytics-Arch-201 exam, many candidates struggle to get the necessary materials. But do not worry; your struggling days are over. The Analytics-Arch-201 PDF contains some of the most valuable preparation tips and the details and instant access to useful [Analytics-Arch-201 study materials just at one click](#).

## Salesforce Analytics-Arch-201 Tableau Architect Certification Details:

Exam Name	Salesforce Tableau Architect
Exam Code	Analytics-Arch-201
Exam Duration	105 minutes
Exam Questions	59
Passing Score	63%
Exam Price	Registration fee: \$200 (USD) Retake fee: \$100 (USD)
Books / Training	<a href="#">Site Admin Learning Path</a> <a href="#">Server Admin Learning Path</a> <a href="#">Server Architect Learning Path</a>
Exam Registration	<a href="#">Pearson VUE</a>
Sample Questions	<a href="#">Salesforce Tableau Architect Certification Sample Question</a>
Practice Exam	<a href="#">Salesforce Tableau Architect Certification Practice Exam</a>

## Analytics-Arch-201 Syllabus:

Objective	Details
<b>Design a Tableau Infrastructure - 22%</b>	
Gather requirements for implementing a complex Tableau deployment	<ul style="list-style-type: none"> <li>- Evaluate requirements for users and their role distributions</li> <li>- Identify relevant constraints and requirements, including future growth</li> <li>- Identify requirements for and recommend a strategy for licensing, including Authorization-to-Run (ATR)</li> <li>- Assess the need for high availability and disaster recovery</li> <li>- Map the features and capabilities of the Tableau Server Add-Ons to requirements</li> </ul>
Plan and implement Tableau Cloud	<ul style="list-style-type: none"> <li>- Plan and implement Tableau Bridge</li> <li>- Plan and implement authentication</li> <li>- Plan and implement automated user provisioning, including System for Cross-Domain Identity Management (SCIM)</li> <li>- Troubleshoot advanced configuration issues</li> <li>- Plan and implement multi-sites using Tableau Cloud Manager</li> </ul>
Plan a migration	<ul style="list-style-type: none"> <li>- Plan a migration of Tableau Cloud to Tableau Server</li> <li>- Plan a migration of Tableau Server to Tableau Cloud</li> <li>- Plan a migration from Windows to Linux</li> <li>- Plan a migration from Linux to Windows</li> <li>- Plan a migration from one identity store to another</li> <li>- Plan a consolidation of multiple Tableau servers or sites into fewer servers or sites</li> <li>- Plan a migration from one Tableau Server environment to another</li> <li>- Create scripts for migration</li> <li>- Use the Tableau Content Migration Tool</li> </ul>
Design an appropriate process topology	<ul style="list-style-type: none"> <li>- Specify process counts (sizing)</li> <li>- Specify node count</li> <li>- Specify service-to-node relationships (node roles), including service isolation and service colocation</li> <li>- Specify when to use external services</li> </ul>
Recommend a Tableau Server configuration	<ul style="list-style-type: none"> <li>- Recommend an appropriate identity store and authentication configuration</li> <li>- Recommend specific configuration keys and values to suit a given use case</li> <li>- Recommend a configuration to address security requirements such as encryption at rest and encryption over the wire</li> </ul>

Objective	Details
	<ul style="list-style-type: none"> <li>- Recommend hardware and network specifications</li> <li>- Create a disaster recovery strategy</li> </ul>
<b>Deploy Tableau Server - 37%</b>	
Implement production-ready Tableau Server deployments	<ul style="list-style-type: none"> <li>- Deploy and configure Tableau Server               <ul style="list-style-type: none"> <li>• Configure an external file store</li> <li>• Configure an external repository</li> <li>• Configure an external gateway</li> <li>• Configure an unlicensed node</li> <li>• Configure a coordination ensemble</li> <li>• Configure a backgrounder process with a specific node role</li> <li>• Configure Tableau for a load balancer</li> </ul> </li> <li>- Install in an air-gapped environment</li> <li>- Validate a disaster recovery/high availability test strategy</li> <li>- Perform a blue-green deployment</li> <li>- Locate and interpret Tableau Server installation logs</li> <li>- Install and configure Resource Monitoring Tool server and agents</li> <li>- Plan and implement automated deployment (using a script, that is, Silent Installer)</li> </ul>
Configure and troubleshoot supported authentication methods	<ul style="list-style-type: none"> <li>- Configure and troubleshoot SAML</li> <li>- Configure and troubleshoot Kerberos</li> <li>- Configure and troubleshoot OpenID Connect</li> <li>- Configure and troubleshoot Mutual SSL</li> <li>- Configure and troubleshoot trusted authentication</li> <li>- Configure and troubleshoot Connected App authentication</li> <li>- Configure and troubleshoot LDAP</li> <li>- Configure and troubleshoot Azure Active Directory</li> <li>- Identify dependencies between authentication methods and Tableau environments, including Tableau Cloud</li> </ul>
Implement encryption	<ul style="list-style-type: none"> <li>- Implement SSL encryption</li> <li>- Implement database encryption</li> <li>- Implement extract encryption</li> <li>- Set up service principal names (SPNs) for Kerberos</li> </ul>
Install and verify Tableau Server on Linux	<ul style="list-style-type: none"> <li>- Install Tableau Server on Linux by using CLI or the Installation Wizard</li> <li>- Identify and resolve issues with installation on Linux</li> <li>- Identify and resolve issues with operating system</li> </ul>

Objective	Details
	and networking configurations - Identify and resolve issues with interfaces and interactions with external systems - Identify and resolve issues with proxy issues - Identify appropriate operating system logs and Tableau logs for troubleshooting - Verify system groups and file system permissions
Install and verify Tableau Server on Windows	- Install Tableau Server on Windows by using CLI or the Installation Wizard - Identify and resolve issues with installation on Windows - Identify and resolve issues with operating system and networking configurations - Identify and resolve issues with interfaces and interactions with external systems - Identify and resolve proxy issues - Identify appropriate operating system logs and Tableau logs for troubleshooting - Verify system groups and file system permissions - Use the Run As service account
<b>Monitor and Maintain a Tableau Deployment - 41%</b>	
Create custom administrative views	- Interpret the repository schema and the event types - Build admin dashboards for common scenarios - Utilize Admin Insights on Tableau Cloud
Perform load testing	- Recommend a load testing strategy - Configure and use a load testing tool such as TabJolt - Configure a test environment - Create appropriate test plans - Interpret load test results and determine the appropriate action
Identify and resolve performance bottlenecks	- Troubleshoot complex performance issues related to workbooks, data sources, and other types of content - Perform resource analysis, latency analysis, and workload analysis to determine root cause of performance issues - Create an action to resolve issues identified in performance recordings - Optimize caching for Tableau Server
Maintain and tune a Tableau Server environment by using observability data	- Map the features and capabilities of the Tableau Server Resource Monitoring Tool to observability requirements - Recommend a strategy for collecting and analyzing Tableau Server logs - Recommend a strategy for collecting and analyzing Tableau Server process metrics - Recommend a strategy for collecting and analyzing operating system and hardware-related

Objective	Details
	metrics - Interpret observability data - Revise architecture based on observability data - Troubleshoot connectivity in a single or multi-node environment, especially database connectivity - Configure and implement Activity Log for Tableau Cloud or Tableau Server
Automate server maintenance functions	- Manage and change Tableau Server resources programmatically, including Tableau Services Manager (TSM), REST APIs, and tabcmd - Recommend a script deployment method, including Windows Scheduler and cron - Recommend automated deployment methods for Tableau Server, Tableau Desktop, and Tableau Prep - Design an automated complex disaster recovery process - Plan and implement multi-node server upgrades - Automate maintenance tasks, such as cleanup and backup - Configure and use the Metadata API
Manage server extensions	- Schedule content automation tasks by using webhooks, tabcmd, REST, or Hyper APIs - Implement and configure dashboard extensions and web data connectors - Configure trusted tickets and connected apps for a custom embedded solution

## Broaden Your Knowledge with Salesforce Analytics-Arch-201 Sample Questions:

### Question: 1

In Tableau, what is a 'Performance Recorder' used for?

- a) Recording user sessions
- b) Tracking data changes
- c) Diagnosing performance issues
- d) Encrypting data transfers

**Answer: c**

**Question: 2**

What is essential for maintaining user access control in Tableau Server?

- a) Managing groups and permissions
- b) Regular password resets
- c) Disabling guest access
- d) Frequent server reboots

**Answer: a**

**Question: 3**

What is the purpose of a Gateway in Tableau Server architecture?

- a) Data encryption
- b) Directing user traffic
- c) Data analysis
- d) Visualizations creation

**Answer: b**

**Question: 4**

Which Tableau component is responsible for caching and performance acceleration?

- a) Data Engine
- b) VizQL Server
- c) Backgrounder
- d) Extracts

**Answer: a**

**Question: 5**

What does the term 'Node' refer to in Tableau Server deployment?

- a) A data point in a visualization
- b) An individual server in a distributed environment
- c) A user account
- d) A type of data connection

**Answer: b**

**Question: 6**

Why is network bandwidth important in Tableau Server deployment?

- a) For faster software download
- b) For user authentication processes
- c) For enhanced data encryption
- d) For efficient data transfer and visualization loading

**Answer: d**

**Question: 7**

Which component is essential for a scalable Tableau Infrastructure?

- a) High-speed internet
- b) Distributed server environment
- c) Single node setup
- d) Desktop-only deployment

**Answer: b**

**Question: 8**

In Tableau Infrastructure, what is a 'Cluster Controller'?

- a) A visualization tool
- b) A component for user management
- c) A server monitoring and coordination tool
- d) A data encryption service

**Answer: c**

**Question: 9**

How can Tableau Server performance be optimized?

- a) By limiting the number of users
- b) Through regular server restarts
- c) By optimizing extracts and efficient design
- d) Using only basic visualizations

**Answer: c**

**Question: 10**

A 'Gantt Chart' in Tableau is typically used for:

- a) Sales data analysis
- b) Real-time data tracking
- c) Geographical mapping
- d) Tracking project timelines

**Answer: d**

## Avail the Study Guide to Pass Salesforce Analytics-Arch-201 Tableau Architect Exam:

- Find out about the Analytics-Arch-201 syllabus topics. Visiting the official site offers an idea about the exam structure and other important study resources. Going through the syllabus topics help to plan the exam in an organized manner.
- Once you are done exploring the [Analytics-Arch-201 syllabus](#), it is time to plan for studying and covering the syllabus topics from the core. Chalk out the best plan for yourself to cover each part of the syllabus in a hassle-free manner.
- A study schedule helps you to stay calm throughout your exam preparation. It should contain your materials and thoughts like study hours, number of topics for daily studying mentioned on it. The best bet to clear the exam is to follow your schedule rigorously.
- The candidate should not miss out on the scope to learn from the Analytics-Arch-201 training. Joining the Salesforce provided training for Analytics-Arch-201 exam helps a candidate to strengthen his practical knowledge base from the certification.
- Learning about the probable questions and gaining knowledge regarding the exam structure helps a lot. Go through the [Analytics-Arch-201 sample questions](#) and boost your knowledge
- Make yourself a pro through online practicing the syllabus topics. Analytics-Arch-201 practice tests would guide you on your strengths and weaknesses regarding the syllabus topics. Through rigorous practicing, you can improve the weaker sections too. Learn well about time management during exam and become confident gradually with practice tests.

## Career Benefits:

Passing the Analytics-Arch-201 exam, helps a candidate to prosper highly in his career. Having the certification on the resume adds to the candidate's benefit and helps to get the best opportunities.

### Here Is the Trusted Practice Test for the Analytics-Arch-201 Certification

VMExam.Com is here with all the necessary details regarding the Analytics-Arch-201 exam. We provide authentic practice tests for the Analytics-Arch-201 exam. What do you gain from these practice tests? You get to experience the real exam-like questions made by industry experts and get a scope to improve your performance in the actual exam. Rely on VMExam.Com for rigorous, unlimited two-month attempts on the Analytics-Arch-201 practice tests, and gradually build your confidence. Rigorous practice made many aspirants successful and made their journey easy towards grabbing the Salesforce Certified Tableau Architect.
